Work Experience

Software Engineer II | FactSet.

Boston, MA | March 2022 - Present

- Developed and maintained Asset Allocation 3.0, a large-scale production web application, contributing to growth from ~50 to 300+ users within a team of 3 engineers and 2 product designers
- Designed and implemented full-stack features across frontend, backend, and cross-team APIs to support configurable user workflows
- Engineered an interactive portfolio performance chart for executive leadership, visualizing historical returns alongside multi-range probabilistic forecasts and introducing a more modern charting library to the codebase
- Refactored the application from static hardcoded views to a dynamic, configurable rendering system, restructuring component architecture, state management, and API layers for long-term maintainability
- Led migration from Vue 2 → Vue 3 and Vuex → Pinia, modernizing the frontend stack and reducing state management verbosity by ~30%
- Improved performance by optimizing asynchronous triggers and long-polling patterns, reducing load times by 30%+
- Increased test coverage by 40%+ through development of E2E (Playwright) and unit tests
- Built an AI-powered internal tool at a company hackathon, implementing programmatic tool-calling and knowledge base integration to give a chatbot the ability to query live calculation engines and model theoretical portfolios
- Led C# training sessions for new hires and participated in a mentorship program for junior engineers

Application Developer | CannonDesign

Irvine, CA | June 2021 – February 2022

- Developed a reusable .NET Core application framework used by 100+ internal users to accelerate development of data-driven tools
- Built a data extraction tool for architectural design software, transforming complex model data into structured SQL datasets and designing the underlying database schema
- Collaborated directly with the CTO to scope, design, and deliver internal software solutions

Web Developer (Freelance)

March 2021 – June 2021

- Built a responsive website for a local business using JavaScript, HTML, and CSS, integrating external APIs (Yelp) for dynamic content

Projects

siennacodes.com

- Built a windowed applet system from scratch, managing independent window state, layering, and custom interaction patterns across the UI
- Implemented a functional terminal emulator with custom command parsing and a navigable virtual file system
- Integrated the Spotify API to display a live personal top 10 most-listened tracks

Technical Skills

- **Languages:** Java, C++, C#, C, Python, JavaScript, TypeScript
- **Frameworks & Runtimes:** React, Vue, Pinia, Express, Flask, .NET Core, Node.js
- **Tools & Systems:** Git, GitHub, GitHub Actions, Linux, Redis, SQL, Docker, Highcharts
- **Testing:** Playwright, Vitest
- **Hardware:** Raspberry Pi, Arduino

Education

B.S. Computer Science | University of California, Irvine

Fall 2019 – Fall 2021

- Specialization in Intelligent Systems
- Treasurer, IEEE Irvine
